

MONASH INDUSTRY TEAM INITIATIVE (MITI) 2016-2017

Milk Movements Model

Harry Kaladis, Nikhil Kant, Kaushal Kulkarni, Dhara Thakkar

*BChemEng/BPharmSc, Master of Applied Finance, BChemEng/BCom,
Master of Business Information Systems*

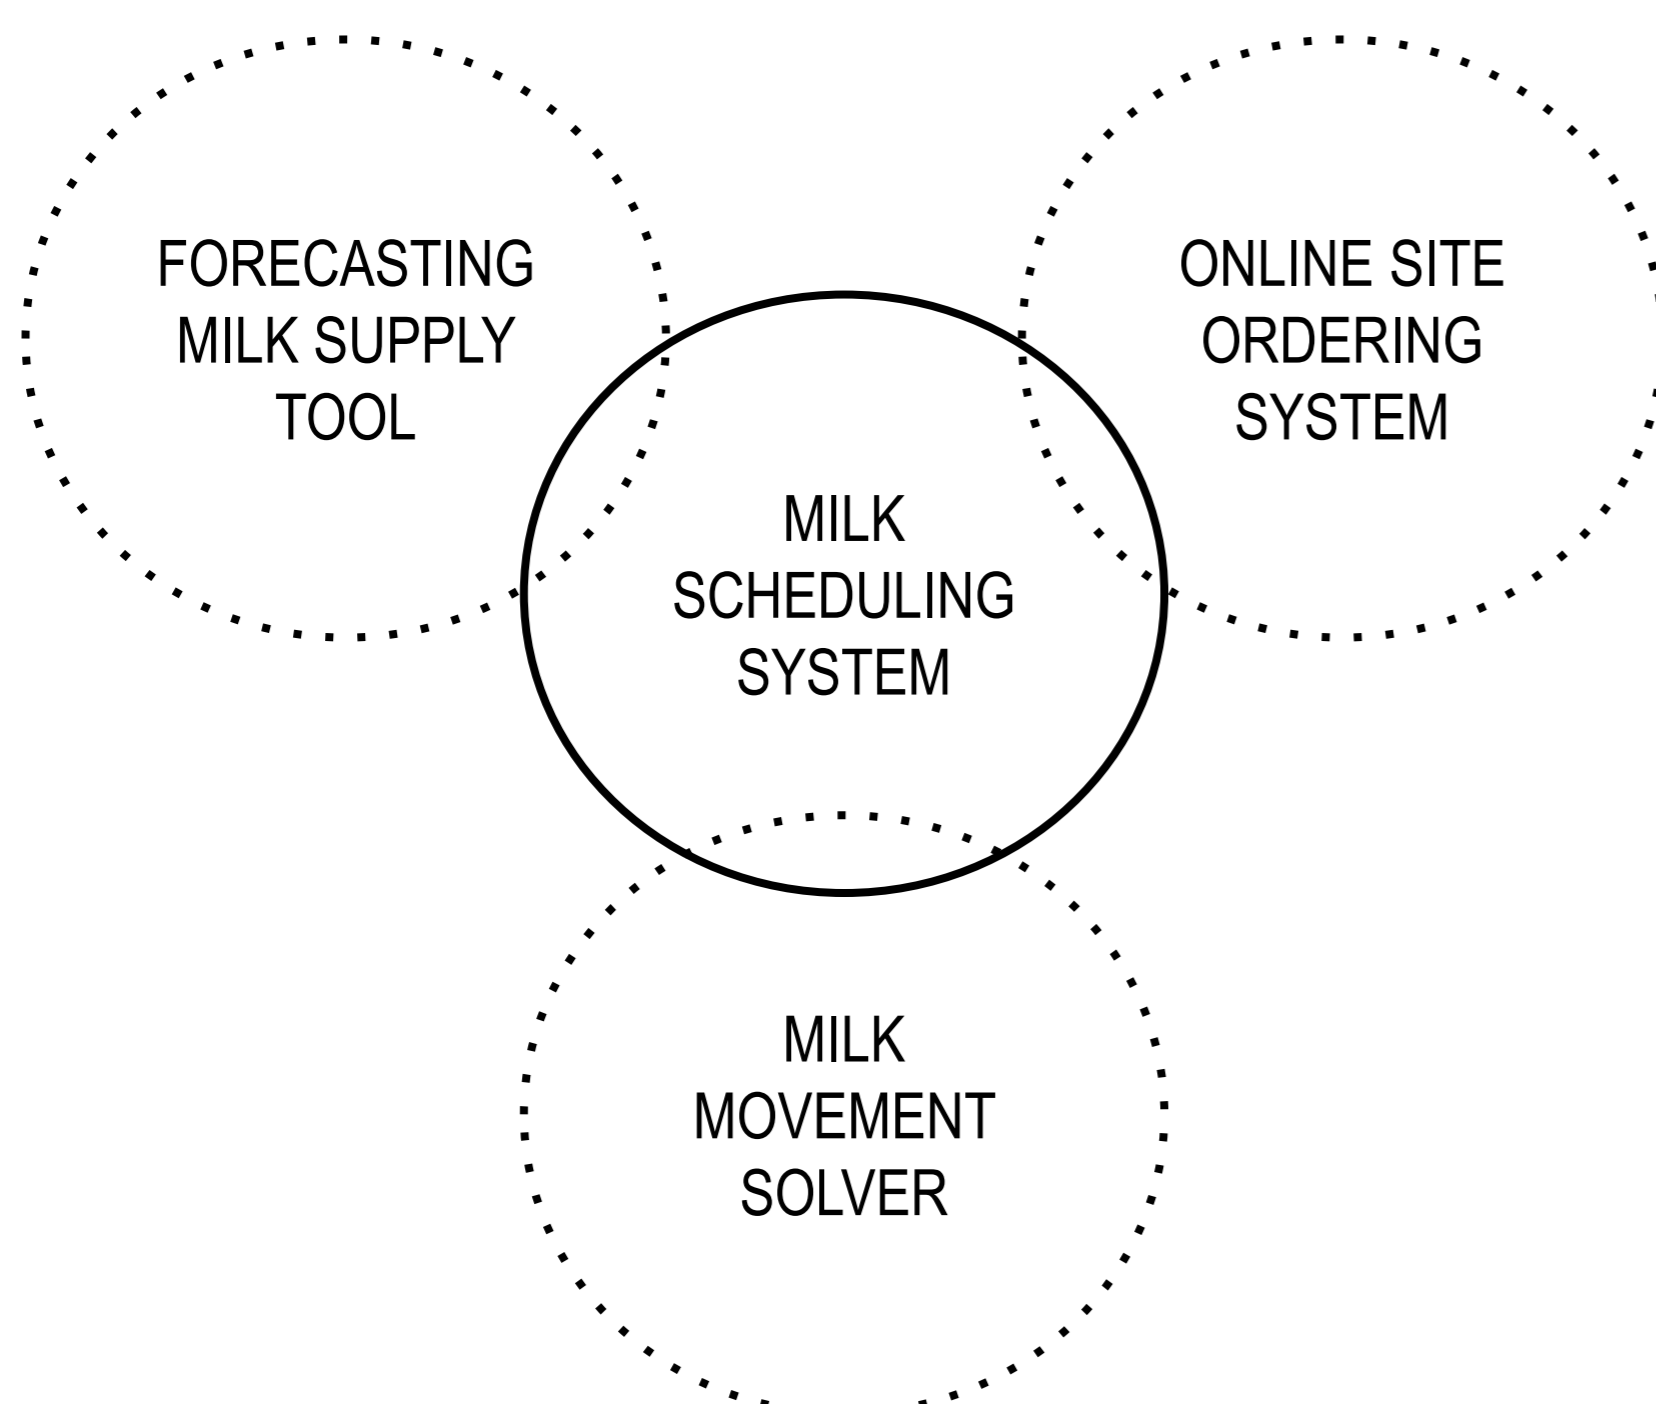

Project Supervisor: Tim Newton (Milk Optimisation and Supply Manager)

PROJECT SCOPE

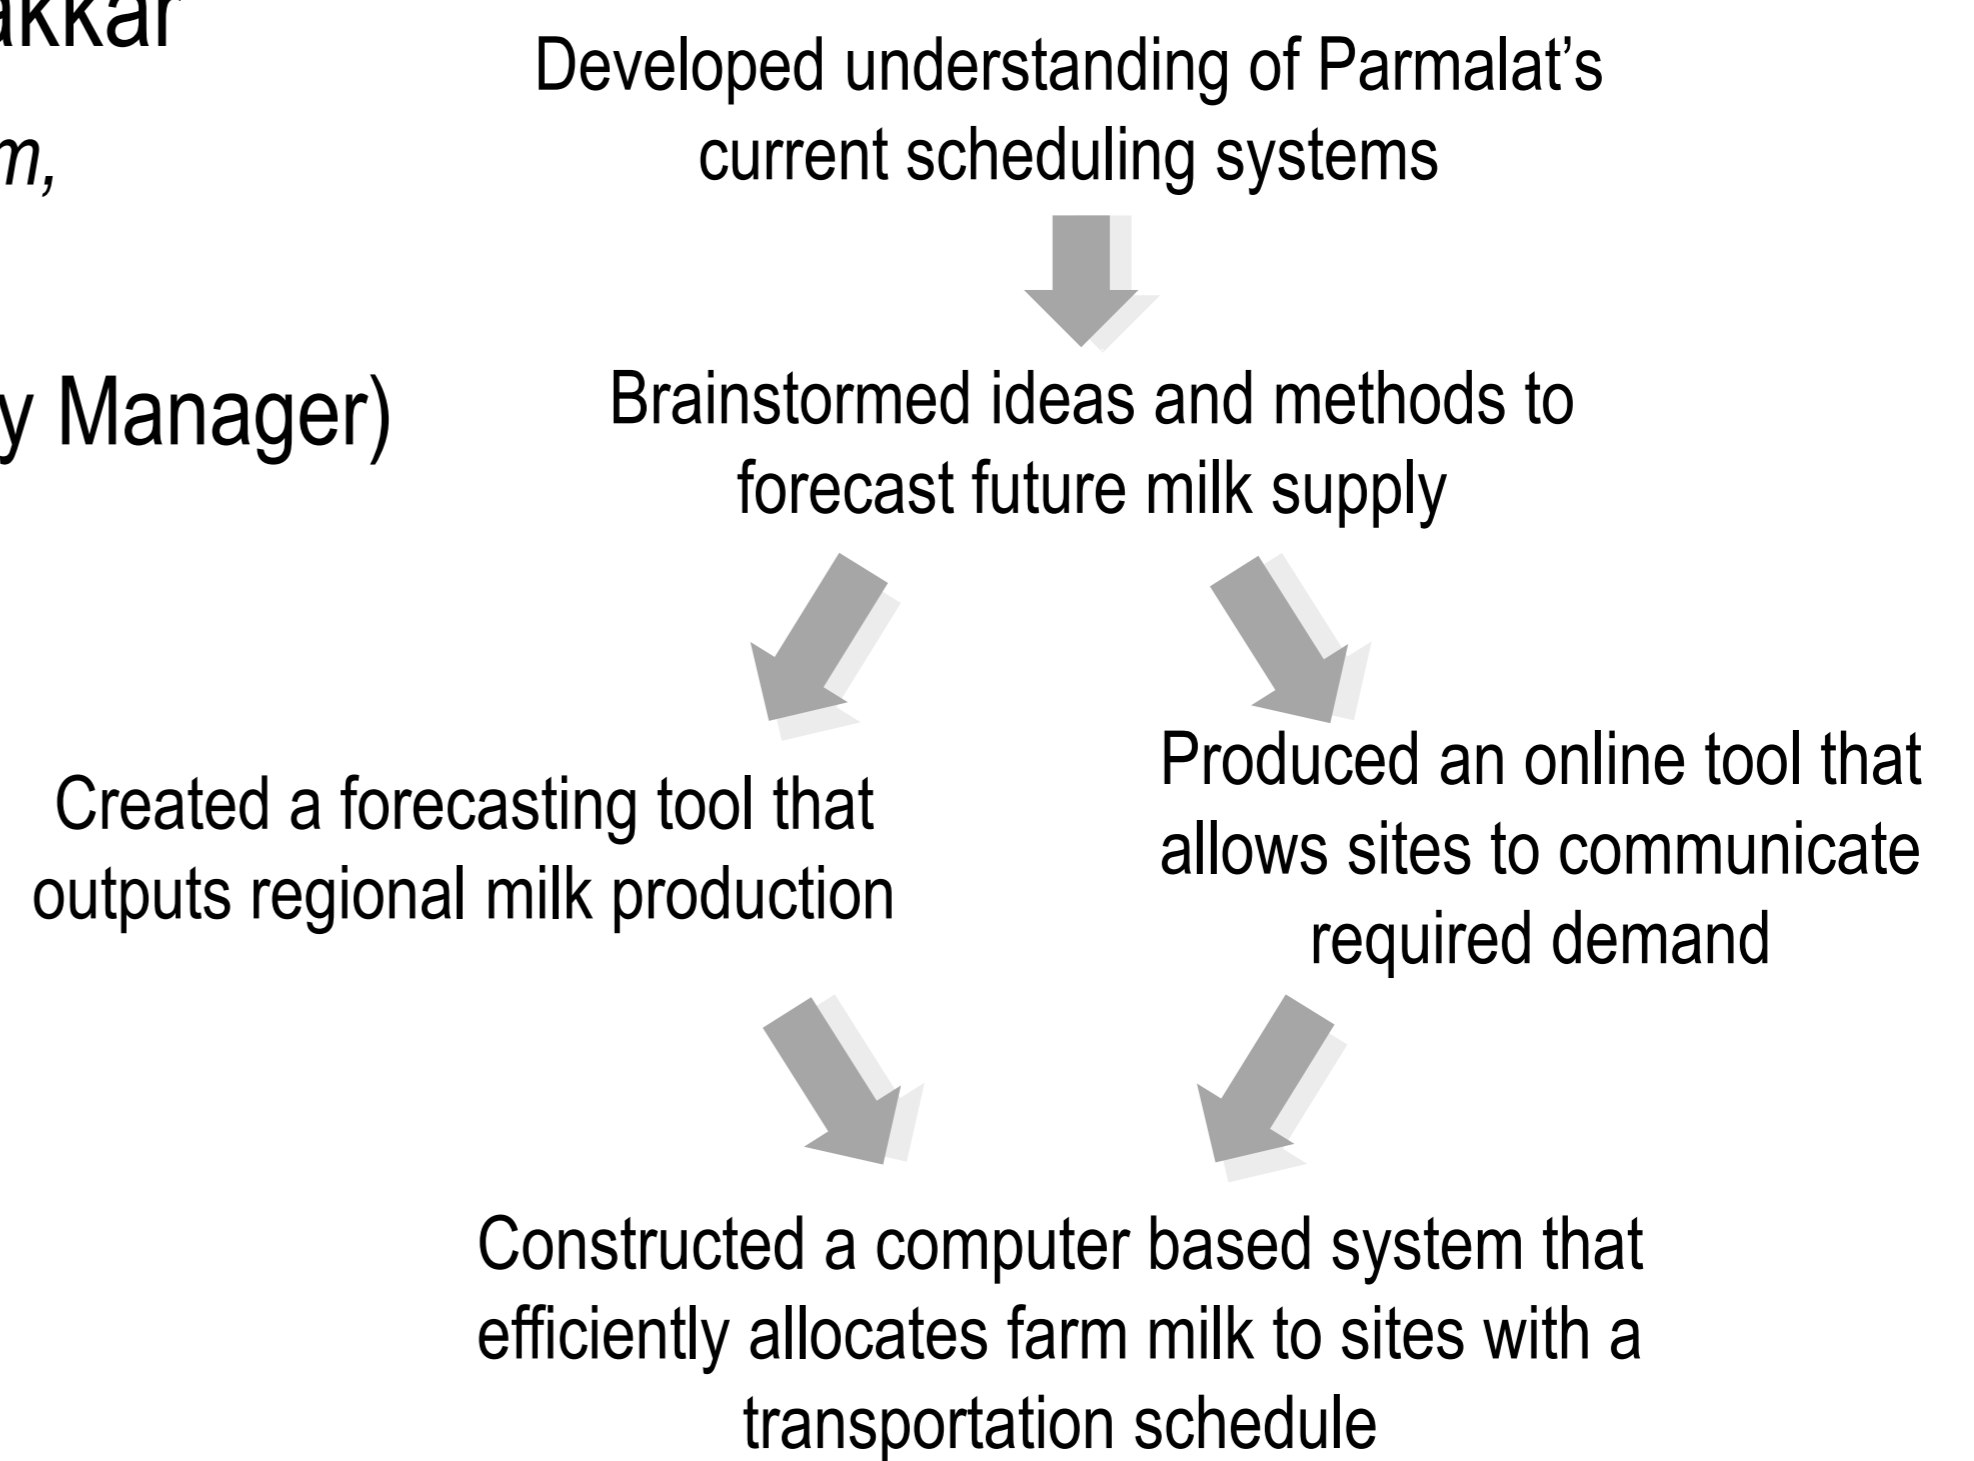

To build a prototype intuitive online model to optimise milk collection and delivery into each processing site in Australia.

Project Aims:

1. Optimise milk supply from farm to processing sites
2. Produce a daily delivery schedule for each production site, specifying the source location (Region or 3rd party) for each load of raw milk
3. Produce a daily 3rd party milk purchase requirement schedule

METHODOLOGY

ENJOYMENT

- "The opportunity to work in a fantastic environment with great people and the ability to contribute to a real life project was an invaluable experience" – *Harry Kaladis*
- "This experience provided a real eye opener into the dynamic and fast-moving nature of the dairy industry with a global company" - *Nikhil Kant*
- "Working with team members from different educational disciplines allowed for great collaboration and the ability to achieve a successful outcome" – *Kaushal Kulkarni*
- "The entire experience was amazing. I got to learn a lot of new technologies and with the support of the managers, I was able to produce what they required" – *Dhara Thakkar*

PROJECT OUTCOMES

- Forecasting tool that predicts Parmalat's regional milk production in both the short and long term
- Online tool that allows Parmalat's processing sites to communicate required quantity of milk
- Tool that efficiently allocates regional milk to processing sites based on freight cost
- Scheduling system that plans milk delivery between dairy farms and processing sites
